

## Regressions with Correlation Matrices<sup>1</sup>

In rare situations (for example if extremely confidential data are involved) data will be provided in the form of a correlation matrix. Following is an example of how to create and use a correlation data matrix. The regression done with the correlation matrix replicates the results from individual-level data.

### SAS Program to Create Correlation Matrix Data and Run Regression with it

```
* corr.sas ;
title1 'corr.sas, Show creating and using correlation matrix' ;

libname x 'j:\migdest\saslib' ;

data one; set x.md1970_a ( keep = sex age higrader ) ;

if age ge 25 and age le 65 ;
if sex = 1 then male = 1 ; else male = 0 ;

title2 'Proc Reg on Traditional Data' ;
proc reg ;
model higrader = age male ; run ;

title2 'Proc Corr, and create data set' ;
proc corr outp= x.pcorr1 ;
var higrader age male ; run ;

title2 'Proc Print data set created by Proc Corr' ;
proc print data = x.pcorr1 ; run ;

title2 'Proc Reg with data set created by Proc Corr' ;
proc reg corr data = x.pcorr1 ;
model higrader = age male ; run ;

title2 'Create SAS Export File to use in SPSS' ;
libname sas2spss xport 'j:\migdest\saslib\pcorr1.xpt' ;
proc copy in = x out = sas2spss ; select pcorr1 ;
run ;
```

### SPSS Program to Use Correlation Data Created by SAS

```
* Matrix.sps, showing how to use correlation data created by sas.
* It is important to check to make sure no problems occurred during translation.

get sas data = 'j:\migdest\saslib\pcorr1.xpt'.
* Must rename two variables for SPSS .
save outfile = 'j:\migdest\saslib\pcorr1.sav'
  rename v1 = rowtype_
         v2 = varname_ .
get file = 'j:\migdest\saslib\pcorr1.sav' .
REGRESSION matrix in (*)
  /MISSING LISTWISE
  /STATISTICS COEFF OUTS R ANOVA
  /CRITERIA=PIN(.05) POUT(.10)
  /NOORIGIN
  /DEPENDENT higrader
  /METHOD=ENTER age male .
```
