

# Divining vs. Defining the Future

- Tech Goals
- Tech/Biz Trends
- Collaboration Barriers
- Conflict & Backlash
- Killer Products

# Unknown Unknowns

Cycles or Singularities?

# Technology Goals

“efficiency & effectiveness”

- **Reduce institutional costs**
  - By achieving synergy
  - By leveraging tech gains
- **Increase individual effectiveness**
  - Any time/place/device access to everything (for everyone entitled)
  - Accelerate innovation by improving collaboration

# Technology & Business Shifts

- Technology

- Smaller/bigger, faster, cheaper, greener  
Info producers & consumers → drowning in data
- Dedicated resources → Virtualization
- Thick clients, local hosting → Cloud-computing
- Desk-centric computing → Mobility

- Business

- Enterprise driven → Consumer/commodity driven  
(e.g. laptops for the 2nd billion Internet users)
- Standards driven → Proprietary silos
- One-time-purchase → Subscriptions and “free”

# Collaborative Latency Conjecture

- Premise: as complexity grows, innovation depends increasingly on effective collaboration.
- Conjecture: Innovation rate is inversely proportional to response latency (delay).  
Caveat: ultra low latency  $\rightarrow$  instability
- The value of a collaboration network is proportional to its S/N ratio divided by the response latency of the collaborators.

# Reliability/Responsiveness Conjecture

- ***Computers*** are becoming **more** reliable & **more** responsive  
(Save perhaps Vista :)
- ***People*** are becoming **less** reliable & **less** responsive

Caveat: “All generalizations are false”

# Why???

Trends increasing collaboration latency

- Information Overload → “Attention Crash”, unplug
- Interaction Overload → “Facebook Fatigue”
- Needing a zillion different logins to do anything
- Shift from 2D to 4D media (text → audio/video)
- Demise of email → telephone tag (async → sync)
- Fewer choices → more choices → chaos

## Revenge of the Experts

The individual user has been king on the Internet, but the pendulum seems to be swinging back toward edited information vetted by professionals.

# Example Debate

“The democratization of publishing is without a doubt a revolution. When we're all dead and gone, **the 21st Century will be remembered as a Digital Renaissance** - one that rivals the original that preceded it by 700 years.”

--Steve Rubel

<http://www.micropersuasion.com/2008/02/the-digital-cur.html>

“Yes traditional print is dying, but I see no sign of quality replacing it. **A new intellectual dark age seems likely.**”

--Mike Gale

<http://www.britannica.com/blogs/2008/04/the-great-unbundling-newspapers-the-net/>

*"I had my own blog for a while, but I decided to go back to just pointless, incessant barking."*
