

*The NESTOR Institute for Deep Sea Research (building at center of picture) is located in Pylos.
The Dynatos (ship at center of dock) will be used to deploy the ARG mooring.*

Pylos is the location of the **NESTOR** Institute for Deep Sea Research. This laboratory is known for the study of high-energy neutrinos (ref). To detect neutrinos, photosensors are placed in the very deep water (4 km deep) of the Ionian Sea southwest of Pylos. Thus, the laboratory has experience deploying ocean moorings in deep water. This experience will be invaluable to the Ionian Sea Rainfall Experiment.

Manos, Elias, Stratos and Eyal discussing deployment plans at the NESTOR Institute.

Elias Markipoulis, Field Engineer at NESTOR

Street scene in Pylos
