【Abstract】

The purpose of this study is to propose building a comfortable urban environment aimed at communing with nature, in a new subdivision currently under reconstruction. The research method involved literature review of new subdivision development, to then identify conditions related to the subject place, to examine the issues, and finally, to propose planning. The resulting proposal is for a forested residential area with the following 3 objectives: this development aims to 1) contribute to establishment of a green network in one area of the city, 2) to bring residents close to nature, and 3) to allow the residents to improve the environment,

Key words : Urban environment, Communing with nature, New subdivision, Green network
