Capital represents its country, the landscape planning for the capital city also epitomizes the idea of how the country should maintain parks and green spaces. The target city is Beijing in China, an emergent economic power. The purpose of this study is to consider the idea the master plan for greenery and open spaces after a review of the layout planning of parks and green spaces, the future images with plan objectives and main measures. The study shows that the plan is characterized by the practical use of public-owned land and the realization of an ideal pattern, the combination of the ring green and the radial layout of parks and green spaces.
