Preface	ix
I Boundary Value Problems and Iterative Methods	1
1 Finite difference approximations	3
1.1 Truncation errors	5
1.2 Deriving finite difference approximations	7
1.3 Second order derivatives	8
1.4 Higher order derivatives	10
1.5 A general approach to deriving the coefficients	10
2 Steady States and Boundary Value Problems	13
2.1 The heat equation	13
2.2 Boundary conditions	14
2.3 The steady-state problem	14
2.4 A simple finite difference method	15
2.5 Local truncation error	17
2.6 Global error	18
2.7 Stability	19
2.8 Consistency	19
2.9 Convergence	20
2.10 Stability in the 2-norm	20
2.11 Green's functions and max-norm stability	22
2.12 Neumann boundary conditions	30
2.13 Existence and uniqueness	33
2.14 Ordering the unknowns and equations	34
2.15 A general linear second order equation	35
2.16 Nonlinear Equations	38
2.16.1 Discretization of the nonlinear BVP	39
2.16.2 Nonuniqueness	41
2.16.3 Accuracy on nonlinear equations	42
2.17 Singular perturbations and boundary layers	44
2.17.1 Interior layers	47

2.18	Nonuniform grids	51
2.18.1	Adaptive mesh selection	53
2.19	Continuation methods	53
2.20	Higher order methods	54
2.20.1	Fourth order differencing	54
2.20.2	Extrapolation methods	54
2.20.3	Deferred corrections	56
2.21	Spectral methods	56
3	Elliptic Equations	61
3.1	Steady-state heat conduction	61
3.2	The five-point stencil for the Laplacian	62
3.3	Ordering the unknowns and equations	63
3.4	Accuracy and stability	65
3.5	The nine-point Laplacian	66
3.6	More difficult problems	68
3.7	Solving the linear system	68
3.7.1	Sparse storage in MATLAB	70
4	Iterative Methods for Sparse Linear Systems	71
4.1	Jacobi and Gauss-Seidel	71
4.2	Analysis of matrix splitting methods	74
4.2.1	Rate of convergence	76
4.2.2	SOR	78
4.3	Descent methods and conjugate gradients	80
4.3.1	The method of steepest descent	81
4.3.2	The A -conjugate search direction	85
4.3.3	The conjugate-gradient algorithm	89
4.3.4	Convergence of CG	91
4.3.5	Preconditioners	97
4.3.6	Incomplete Cholesky and ILU preconditioners	99
4.4	The Arnoldi process and GMRES algorithm	100
4.4.1	Krylov methods based on three term recurrences	103
4.4.2	Other applications of Arnoldi	104
4.5	Newton-Krylov methods for nonlinear problems	105
4.6	Multigrid methods	107
4.6.1	Slow convergence of Jacobi	107
4.6.2	The multigrid approach	110
II	Initial Value Problems	115
5	The Initial Value Problem for ODEs	117
5.1	Linear ODEs	118
5.1.1	Duhamel's principle	119
5.2	Lipschitz continuity	120

Contents	v	
5.2.1	Existence and uniqueness of solutions	120
5.2.2	Systems of equations	121
5.2.3	Significance of the Lipschitz constant	122
5.2.4	Limitations	123
5.3	Some basic numerical methods	124
5.4	Truncation errors	126
5.5	One-step errors	126
5.6	Taylor series methods	127
5.7	Runge-Kutta Methods	128
5.7.1	Embedded methods and error estimation	133
5.8	One-step vs. multistep methods	134
5.9	Linear Multistep Methods	135
5.9.1	Local truncation error	137
5.9.2	Characteristic polynomials	138
5.9.3	Starting values	139
5.9.4	Predictor-corrector methods	140
6	Zero-Stability and Convergence for Initial Value Problems	141
6.1	Convergence	141
6.2	The test problem	142
6.3	One-step methods	142
6.3.1	Euler's method on linear problems	142
6.3.2	Relation to stability for BVPs	144
6.3.3	Euler's method on nonlinear problems	145
6.3.4	General 1-step methods	146
6.4	Zero-stability of linear multistep methods	147
6.4.1	Solving linear difference equations	148
7	Absolute Stability for ODEs	153
7.1	Unstable computations with a zero-stable method	153
7.2	Absolute stability	155
7.3	Stability regions for LMMs	156
7.4	Systems of ordinary differential equations	159
7.4.1	Chemical Kinetics	160
7.4.2	Linear systems	163
7.4.3	Nonlinear systems	164
7.5	Practical choice of step size	165
7.6	Plotting stability regions	166
7.6.1	The Boundary Locus Method for LMMs	166
7.6.2	Plotting stability regions of one-step methods	167
7.7	Relative stability regions and order stars	169
8	Stiff ODEs	173
8.1	Numerical Difficulties	174
8.2	Characterizations of stiffness	175
8.3	Numerical methods for stiff problems	176

8.3.1	A-stability and $A(\alpha)$ -stability	177
8.3.2	L-stability	177
8.4	BDF Methods	179
8.5	The TR-BDF2 method	180
8.6	Runge-Kutta-Chebyshev explicit methods	182
9	Diffusion Equations and Parabolic Problems	187
9.1	Local truncation errors and order of accuracy	189
9.2	Method of Lines discretizations	190
9.3	Stability theory	192
9.4	Stiffness of the heat equation	193
9.5	Convergence	195
9.5.1	PDE vs. ODE stability theory	196
9.6	von Neumann analysis	197
9.7	Multi-dimensional problems	201
9.8	The LOD method	202
9.8.1	Boundary conditions	203
9.8.2	The ADI method	205
9.9	Other discretizations	206
10	Advection Equations and Hyperbolic Systems	207
10.1	Advection	207
10.2	MOL discretization	209
10.2.1	Forward Euler time discretization	211
10.2.2	Leapfrog	211
10.2.3	Lax-Friedrichs	212
10.3	The Lax-Wendroff method	213
10.3.1	Stability analysis	216
10.4	Upwind methods	217
10.4.1	Stability analysis	218
10.4.2	The Beam-Warming method	218
10.5	Von Neumann analysis	219
10.6	Characteristic tracing and interpolation	220
10.7	The CFL Condition	222
10.8	Some numerical results	225
10.9	Modified Equations	225
10.10	Hyperbolic systems	231
10.10.1	Characteristic variables	231
10.11	Numerical methods for hyperbolic systems	232
10.12	Initial boundary value problems	233
10.12.1	Analysis of upwind on the IBVP	233
10.12.2	Outflow boundary conditions	235
10.13	Other discretizations	237
11	Mixed Equations	239
11.1	Some examples	239

Contents	vii
<hr/>	
11.2	Fully coupled MOL 242
11.3	Fully coupled Taylor series methods 242
11.4	Fractional step methods 243
11.5	Implicit-explicit methods 245
11.6	Exponential time differencing methods 246
11.6.1	Implementing ETD methods 248
III	Appendices 251
12	Measuring Errors 253
12.1	Errors in a scalar value 253
12.1.1	Absolute error 253
12.1.2	Relative error 254
12.2	“Big-oh” and “little-oh” notation 255
12.3	Errors in vectors 256
12.3.1	Norm equivalence 257
12.3.2	Matrix norms 258
12.4	Errors in functions 258
12.5	Errors in grid functions 259
12.5.1	Norm equivalence 261
12.6	Estimating errors in numerical solutions 262
12.6.1	Estimates from the true solution 263
12.6.2	Estimates from a fine-grid solution 264
12.6.3	Estimates from coarser solutions 265
13	Polynomial Interpolation and Orthogonal Polynomials 267
13.1	The general interpolation problem 267
13.2	Polynomial interpolation 268
13.2.1	Monomial basis 268
13.2.2	Lagrange basis 268
13.2.3	Newton form 268
13.2.4	Error in polynomial interpolation 270
13.3	Orthogonal polynomials 271
13.3.1	Legendre polynomials 272
13.3.2	Chebyshev polynomials 273
14	Eigenvalues and inner product norms 277
14.1	Similarity transformations 278
14.2	Diagonalizable matrices 279
14.3	The Jordan Canonical Form 280
14.4	Symmetric and Hermitian matrices 282
14.5	Skew symmetric and skew Hermitian matrices 282
14.6	Normal matrices 283
14.7	Toeplitz and circulant matrices 283
14.8	The Gershgorin theorem 286

14.9	Inner-product norms	288
14.10	Other inner-product norms	290
15	Matrix powers and exponentials	293
15.1	The resolvent	294
15.2	Powers of matrices	294
15.2.1	Solving linear difference equations	298
15.2.2	Resolvent estimates	299
15.3	Matrix exponentials	301
15.3.1	Solving linear differential equations	304
15.4	Nonnormal matrices	304
15.4.1	Matrix powers	305
15.4.2	Matrix exponentials	307
15.5	Pseudospectra	311
15.5.1	Nonnormality of a Jordan block	312
15.6	Stable families of matrices and the Kreiss Matrix Theorem . . .	313
15.7	Variable coefficient problems	316
16	Partial Differential Equations	321
16.1	Classification of differential equations	321
16.1.1	Second-order equations	321
16.1.2	Elliptic equations	322
16.1.3	Parabolic equations	323
16.1.4	Hyperbolic equations	323
16.2	Derivation of PDEs from conservation principles	324
16.2.1	Advection	325
16.2.2	Diffusion	326
16.2.3	Source terms	327
16.2.4	Reaction-diffusion equations	327
16.3	Fourier Analysis of Linear PDEs	328
16.3.1	Fourier transforms	328
16.3.2	The advection equation	329
16.3.3	The heat equation	330
16.3.4	The backward heat equation	332
16.3.5	More general parabolic equations	333
16.3.6	Dispersive waves	333
16.3.7	Even vs. odd order derivatives	334
16.3.8	The Schrödinger equation	335
16.3.9	The dispersion relation	335
16.3.10	Wave packets	339
	Bibliography	341
	Index	348
