

Conceptual Design for Providing UW NetID's To Cascadia Community College Users

(revised 3/2/05)

Cascadia PIN – Maintained and supported by Cascadia Community College

Cascadia Authorization Web Pages – Created and Maintained by Cascadia Community College (CCC) - Used for initial setup and password resets.

UW NetID Account Creation Pages – used to establish the UW Net ID, Kerberos and U Forwarding Services

AVF – Auxiliary Validation File – target for storing data concerning the CCC data

Shibboleth IDP and System - The Shibboleth System provides web authentication services designed for use in federated situations, such as UW applications serving non-UW users, or UW users using remote applications. Shibboleth is based on the Security Assertion Markup Language (SAML) standard, published by OASIS. This system will be located at Cascadia. CCC would have to run a Shibboleth application, with technical support from the UW C&C staff .
