Agenda for the Pine 4 Meeting Wednesday September 2 at 1:30

So far, the following has happened with Pine 4 and PCpine 4:

- (a) Pine 4 has been made available on all the major UA machines
- (b) It has been invoked over 2000 times by many different users on homer, dante, mead, goodall, saul, and becker
- (c) We have had over 30 replies from users (about 25 of which are from Mike Ramey) with questions, bug reports, and suggestions.
- (d) PCpine 4 test versions have been released to some people, but I have seen no replies yet from users.

So, the following issues remain to be discussed:

- (a) What is the importance of releasing Pine 4 this Autumn (e.g., does it solve certain problems [such as the folder locking problems], does it mesh with other software being installed, does it add highly desirable capabilities, etc?)
- (b) Do we need any other testing before release, such as load-testing?
